

Stevens Advanced Driver Training

One of our most popular programs is Stevens Advanced Driver Training. Every year many police officers and other emergency services workers are injured or killed in vehicle crashes. Don't let it happen to you!

This day long, hands-on driving program will show you a wide range of simple but effective driving techniques that could save you or one of your co-workers from injury or death. Each participant will learn the limits of the vehicle, secrets of steering, braking, and handling, and how to avoid a variety of everyday driving hazards. The Steven's goal is simply to teach clients how to access their cars' full potential for accident avoidance, and to anticipate and respond to emergency situations. The end result is an advanced driver training course that people love to attend while at the same time minimizing downtime caused by accident repairs, and most importantly keeping your work force safe.

Stevens began advanced driver training over twenty years ago, making them one of the oldest companies in this field delivering instruction to police, emergency vehicle and high mileage corporate drivers. They have innovated many unique exercises to keep abreast of changing automotive technologies such as ABS brakes and variable ratio training. Steven's fine instructors are the foundation of their success, and most have more than ten years of experience with Stevens.

Steven's training is based on the belief, gained through years of experience, that any driver can learn the kind of advanced car control techniques used by professional drivers. Whether your needs are for municipal, corporate, or emergency personnel, Stevens will exceed your expectations.
